

May 18, 2018

Ms. Kimberley Kitteringham  
City Clerk  
City of Markham  
101 Town Centre Boulevard  
Markham, ON L3R 9W3

Dear Ms. Kitteringham:

**Re: Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

Regional Council, at its meeting held on May 17, 2018, adopted the following recommendations of Committee of the Whole regarding "Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments":

1. Council endorse the proposed amendments to the Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report provided in Attachment 1.
2. Council approve the appointment of Colleen Barfoot as a Risk Management Inspector under Part IV of the *Clean Water Act, 2006*.
3. The Regional Clerk issue a certificate of appointment bearing the clerk's signature to the Risk Management Inspector.
4. The necessary bylaw be presented to Council in May 2018 to bring the appointment into effect.
5. The Regional Clerk circulate this report and attachment to Clerks of the local municipalities, Chair, South Georgian Bay Lake Simcoe Source Protection Committee, Chair, Credit Valley, Toronto Region and Central Lake Ontario Source Protection Committee, and Director Source Protection Programs Branch, Ministry of the Environment and Climate Change.

A copy of Clause 9 of Committee of the Whole Report No. 8 is enclosed for your information.

Please contact Laura McDowell, Director, Environmental Promotion and Protection, Environmental Services at 1-877-464-9675 ext. 75077 if you have any questions with respect to this matter.

Sincerely,

A handwritten signature in black ink, appearing to be 'C. Raynor', written over a horizontal line.

Christopher Raynor  
Regional Clerk

/C. Clark  
Attachments

Clause 9 in Report No. 8 of Committee of the Whole was adopted, without amendment, by the Council of The Regional Municipality of York at its meeting held on May 17, 2018.

**9**

**Central Lake Ontario, Toronto Region and Credit Valley  
Source Protection Plan and Toronto & Region  
Assessment Report Amendments**

Committee of the Whole recommends adoption of the following recommendations contained in the report dated April 18, 2018 from the Commissioner of Environmental Services:

1. Council endorse the proposed amendments to the Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report provided in Attachment 1.
2. Council approve the appointment of Colleen Barfoot as a Risk Management Inspector under Part IV of the *Clean Water Act, 2006*.
3. The Regional Clerk issue a certificate of appointment bearing the Clerk's signature to the Risk Management Inspector.
4. The necessary bylaw be presented to Council in May 2018 to bring the appointment into effect.
5. The Regional Clerk circulate this report and attachment to Clerks of the local municipalities, Chair, South Georgian Bay Lake Simcoe Source Protection Committee, Chair, Credit Valley, Toronto Region and Central Lake Ontario Source Protection Committee, and Director Source Protection Programs Branch, Ministry of the Environment and Climate Change.

---

Report dated April 18, 2018 from the Commissioner of Environmental Services now follows:

# **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

## **1. Recommendations**

It is recommended that:

1. Council endorse the proposed amendments to the Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report provided in Attachment 1.
2. Council approve the appointment of Colleen Barfoot as a Risk Management Inspector under Part IV of the *Clean Water Act, 2006*.
3. The Regional Clerk issue a certificate of appointment bearing the clerk's signature to the Risk Management Inspector.
4. The necessary bylaw be presented to Council in May 2018 to bring the appointment into effect.
5. The Regional Clerk circulate this report and attachment to Clerks of the local municipalities, Chair, South Georgian Bay Lake Simcoe Source Protection Committee, Chair, Credit Valley, Toronto Region and Central Lake Ontario Source Protection Committee, and Director Source Protection Programs Branch, Ministry of the Environment and Climate Change.

## **2. Purpose**

This report seeks Council endorsement of the proposed changes to the Central Lake Ontario, Toronto Region and Credit Valley (CTC) Source Protection Plan and Toronto & Region Assessment Report to simplify policy implementation for both York Region and local municipalities. The Toronto Region Source Protection Authority will include council endorsements from the Region and local municipalities in their submission package to the Ministry of the Environment and Climate Change (Ministry).

This report also seeks approval of appointment of Colleen Barfoot as Risk Management Inspector.

# **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

## **3. Background and Previous Council Direction**

### **Source Water Protection program protects drinking water**

Source Water Protection is a key component of the multi-barrier approach used by York Region to ensure clean and safe drinking water. York Region is located within the jurisdiction (or the area) of two Source Protection Authorities as shown in Figure 1. Assessment reports completed by the Source Protection Authorities identified:

- Vulnerable areas including wellhead protection areas, intake protection zones, significant groundwater recharge areas and highly vulnerable aquifers.
- Potential threats to drinking water, ranked as low, moderate or significant.

### **Source Protection Plan policies require action by municipalities**

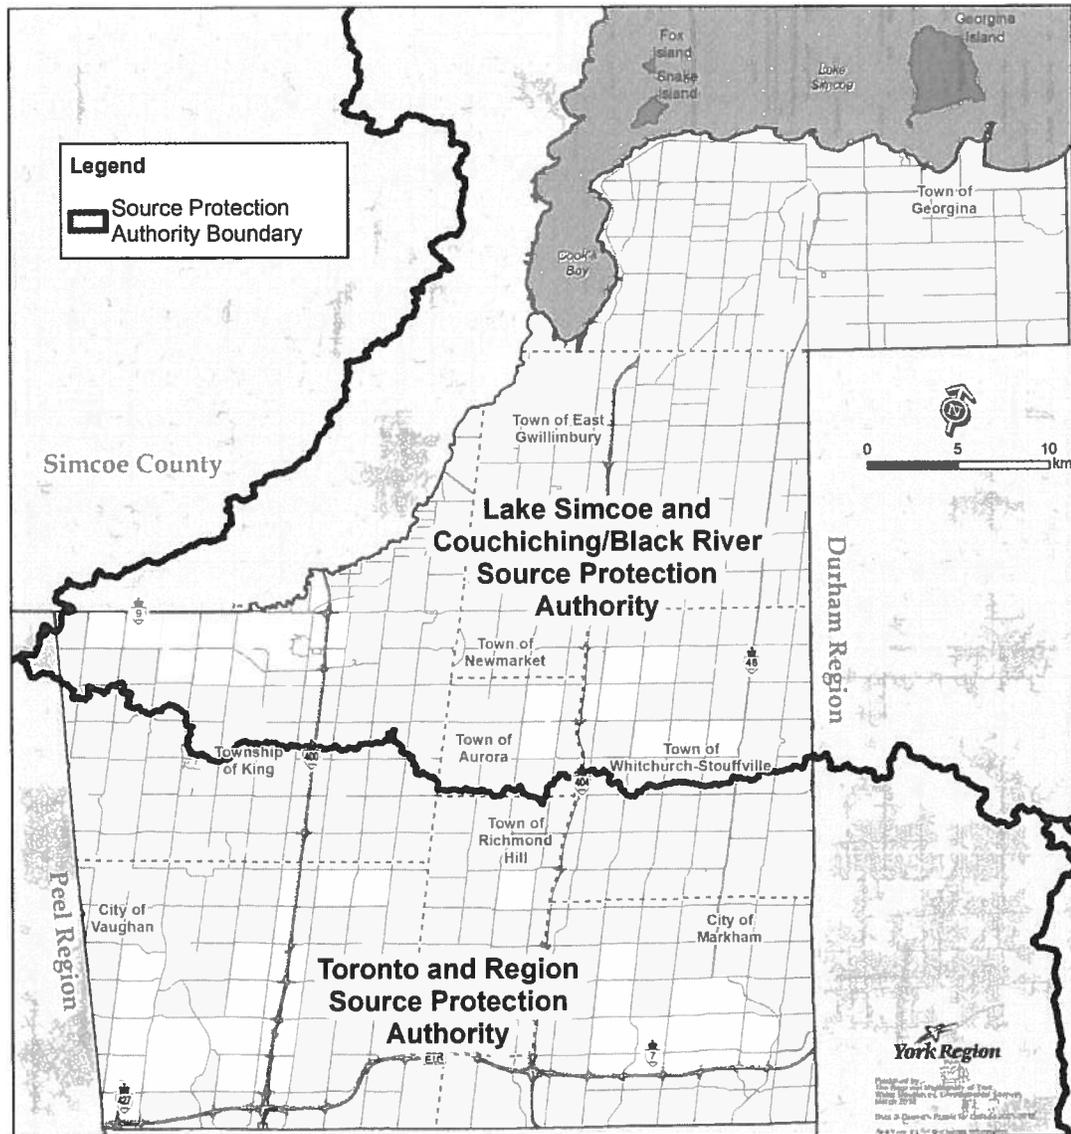

The South Georgian Bay Lake Simcoe Source Protection Plan came into effect on July 1, 2015, and the CTC Source Protection Plan came into effect on December 31, 2015. Both plans contain policies that must be implemented by the Region and local municipalities to manage existing and future threats to protect drinking water quality and quantity.

### **Source Protection Plan implementation on track in York Region**

As detailed in the sixth annual Source Protection Annual Report ([2017 Report on Source Water Protection Implementation](#)) provided to Council in January, York Region is among the leading agencies in the province for Source Protection implementation.

# Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments

Figure 1  
York Region's Two Source Protection Authorities

## Good environmental stewardship has resulted in decreased incentive program costs

To address current potential threats to drinking water, Risk Management Plans are being negotiated with business owners and farmers who have land use activities that may pose a risk to drinking water. The businesses and farmers engaged to date in Risk Management Plan negotiations are good stewards of their land/business. Most of the required risk management measures have been in place. As a result, Risk Management Plans are requiring minor additional

## **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

measures, and the cost to implement them is less than forecast when the incentive program was developed. The budget for the program has been reduced from \$250,000 a year in 2014 to \$75,000 a year in 2018. Due to delays in provincial approval of the Source Protection Plans the incentive funding program is expected to be required for two more years (to 2020) to match the deadlines in the Plans. The resource requirements for the program will be included in the 2019 and 2020 budget process.

### **Policy to maintain groundwater quantity implemented in partnership with Conservation Authorities and local municipalities**

Changes in land use associated with development may limit the amount of water that seeps into the ground (i.e. paving a large greenspace) and could affect the quantity of water available from a municipal well. Both Source Protection Plans affecting York Region contain policies to manage this risk by requiring large development proposals to demonstrate that components of the water cycle, including groundwater recharge, will not be altered. This requirement is complementary to similar policies to maintain post-development water balance elements such as those in the Provincial Policy Statement, Oak Ridges Moraine Conservation Plan, and Lake Simcoe Protection Plan.

Local municipal planning staff work with development proponents to address maintaining components of the water cycle, and Conservation Authority staff provide technical review of the submitted water balance assessments.

### **Source Protection policies reviewed on a regular basis and updated as necessary**

The Ministry stated in their approval letters that Source Protection Plans be reviewed regularly. The Source Protection Plans came into effect in 2015 and an update is expected in 2021. The *Clean Water Act, 2006* also allows for the Source Protection Authority to request specific updates outside of that cycle if drinking water systems have been added or removed, implementation challenges have been encountered, or significant new technical work has been completed.

### **Consultation with affected stakeholders and municipalities mandated**

The *Clean Water Act, 2006* requires that stakeholders potentially affected by the proposed amendments be consulted for both required cyclical updates and amendments requested by the Source Protection Authority. The Act also requires Council endorsement of any proposed changes by affected upper and lower tier municipalities. The Council resolutions will be included in the submission package to the Ministry.

## **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

### **Clean Water Act specifies authority of Risk Management Inspectors and appointment process**

The *Clean Water Act, 2006* provides authority for Risk Management Inspectors to conduct inspections to ensure compliance with Risk Management Plans and issue orders to address non-compliance. The Region's source protection program currently has two Risk Management Inspectors appointed by Council who inspect a total of 84 Risk Management Plans, with over 150 Risk Management Plans expected by end of 2020.

The legislation also specifies that municipal Council resolutions and certificates of appointment issued by the clerk are required to formalize the appointment of a Risk Management Inspector.

## **4. Analysis and Implications**

### **Technical updates and implementation challenges triggered need for Source Protection Plan and Assessment Report amendments**

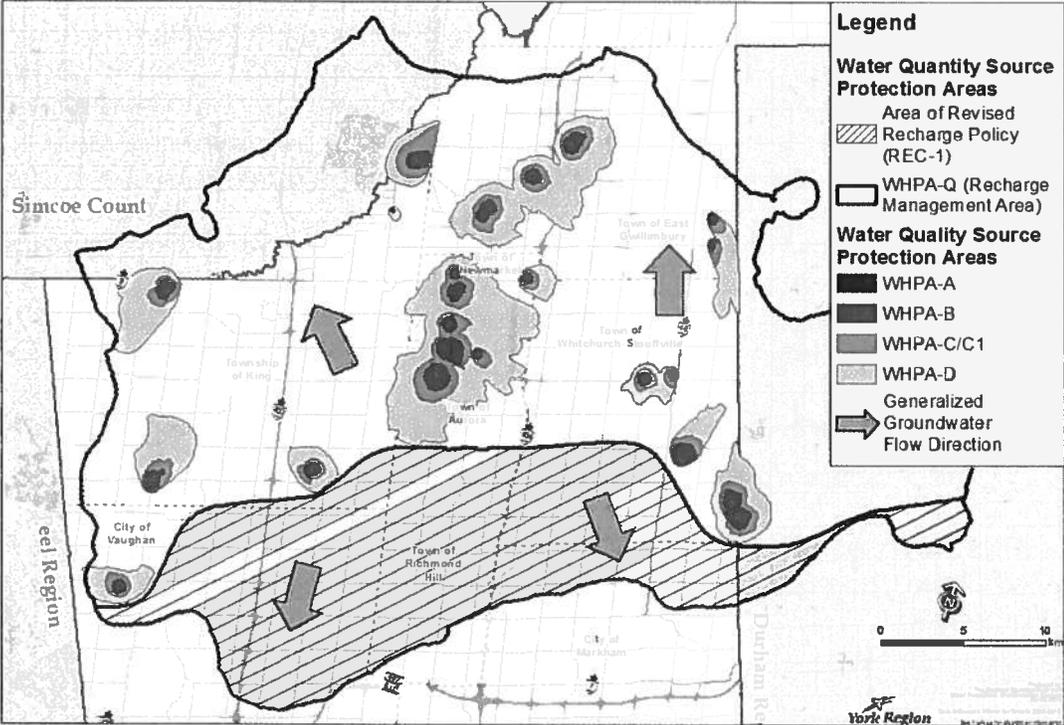

The Toronto and Region Source Protection Authority has requested an amendment to the CTC Source Protection Plan and Toronto & Region Assessment Report to improve implementation and reflect recently completed technical work. Policy changes most relevant to York Region include: proposed policy revisions to improve planning implementation for protecting groundwater quantity (Policy REC-1, Attachment 1), and a timeline revision for Official Plan updates (Policy T-8, Attachment 1).

### **Extent of recharge management area and nature of development in southern York Region posed implementation challenges**

The current Source Protection Plan policy requires that large developments in the Recharge Management Area (WHPA-Q, Figure 2) maintain the amount of pre-development water that enters the ground, or find off-site compensating enhancement projects. Local municipalities are concerned that future developments on small lots with challenging site characteristics will not be able to maintain 100 percent of the pre-development water balance after the site is developed.

**Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

**Figure 2  
Area of Revised Recharge Policy**

**Simplification of policy provides implementation flexibility while maintaining drinking water protection**

Changes to the amount of water entering the ground in the southern part of York Region has little impact on Region municipal supply wells. Groundwater in the southern part of the Region generally flows to the south, away from Region wells. In recognition of implementation challenges and limited impact to Region drinking water supplies, a revised recharge policy is proposed (Policy REC-1, Attachment 1). Within the area of revised recharge policy (Figure 2), development would require implementation of best management practices to maintain the amount of water that seeps into the ground post-development. This flexibility in policy will reduce effort required for planning staff to process applications for large developments in this area.

The proposed policy will be implemented through the Source Protection Plan conformity exercise associated with the York Region Official Plan 2010, update. The current Official Plan recharge management policies will be reviewed and updated to reflect this proposed policy direction.

## **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

### **Timeline policy change provides more time for municipalities to update Official Plans to conform to Source Protection Plan**

The Region and local municipalities have been working together to ensure land use planning decisions protect drinking water quality and quantity. Local municipalities within northern York Region are on track to achieve official plan updates within the timeline prescribed in the Source Protection Plan (i.e. regularly scheduled updates per *Planning Act* requirements).

The timeline in southern York Region is less flexible, with a fixed deadline of December 31, 2020. A proposed revision to the CTC Plan will provide the needed flexibility for the Region and local municipalities to update their official plans in accordance with *Planning Act* requirements (Policy T-8, Attachment 1).

### **Other minor policy changes related to snow storage, application of road salt and septic systems will occur**

The proposed amendments also include minor administrative changes. For example, the map in the Assessment Report for Nobleton Well #5 was incorrectly labelled as Well #4. Updated mapping will be provided to the Province.

Other minor policy changes included in Attachment 1:

- Revisions to policies that clarify implementation requirements and exempts minor residential uses (i.e. building permits for decks) ("Transition Provision", and Policy GEN-1).
- Reducing the areas where new snow storage facilities would be prohibited and instead managing these sites through Risk Management Plans (Policy SNO-1).
- Updating mapping of Significant Groundwater Recharge Areas to reflect revisions to technical work by Toronto Region Conservation Authority. The update will increase the extent of the mapped areas in the southern part of the Region by approximately 20 per cent.
- Updating policies related to best management practices for road salt, such as parking lot design that minimizes the need for repeat application of road salt (Policy SAL-10, 11, 12, and 13).
- Allowing septic systems where approval by the municipality was granted prior to the Source Protection Plan going into effect (Policy SWG-3).

## **Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

### **Colleen Barfoot recommended as Risk Management Inspector**

Council has appointed a Risk Management Official, alternate Risk Management Official, and three Risk Management Inspectors to implement Source Protection Plans in York Region. Due to staffing changes in the Water Resources group, Colleen Barfoot will be completing Risk Management Inspector duties as part of her role. Colleen Barfoot has completed the required training and is a Ministry certified Risk Management Inspector. The *Clean Water Act, 2006* requires that Risk Management Inspectors be formally appointed by Council.

## **5. Financial Considerations**

The Toronto and Region Source Protection Authority will manage all public consultation required for the Source Protection Plan and Assessment Report amendments. The Ministry source protection program will provide the estimated \$3,000 of funding required for the consultation.

The Region's source protection program 2018 operating budget is \$1.1 million and funded through the water rate.

## **6. Local Municipal Impact**

Infusion of flexibility in the proposed policies will reduce the effort required for planning staff to process applications for large developments in the area of revised recharge policy (Figure 2). The *Clean Water Act, 2006* requires local municipalities within Toronto and Region Source Protection Authority to endorse the proposed changes to the Source Protection Plan and Assessment Report as part of the Ministry's approval process. York Region staff have assisted local municipal planning staff with their council reports.

## **7. Conclusion**

### **Proposed amendments to Source Protection Plan will improve implementation of related land use planning policies**

Planning approval authorities must comply with the policies included in the Source Protection Plan. Simplification of the policy makes implementation more efficient and less costly for all stakeholders in the process. Extending the CTC Source Protection Plan deadline will allow local municipalities to bring their Official Plans into conformity with the Source Protection Plans.

**Central Lake Ontario, Toronto Region and Credit Valley Source Protection Plan and Toronto & Region Assessment Report Amendments**

**Appointing Colleen Barfoot as Risk Management Inspector required to continue addressing existing potential threats**

Implementation of Source Protection policies is progressing well across York Region. The business owners and farmers with activities posing potential threats to municipal drinking water have been cooperative in working with Regional staff to develop Risk Management Plans to address those activities. Many of the measures required to manage potential threats were already in place, and inspection efforts have shown a commitment to implement the additional required measures. Risk Management Inspectors coordinate these efforts, and appointing Colleen Barfoot will ensure sufficient resources are available to maintain momentum.

For more information on this report, please contact Laura McDowell, Director, Environmental Promotion and Protection at 1-877-464-9675 ext. 75077.

TEXT HIGHLIGHTED IN GREY INDICATES A REMOVAL (STRIKETHROUGH) OR ADDITION (BOLD) FROM APPROVED CTC SOURCE PROTECTION PLAN (JULY 2015)

TRANSITION PROVISION

Under the *Clean Water Act, 2006*, there is consideration for source protection plans (SPPs) to have a Transition Provision that outlines the circumstances under which a “future” drinking water threat activity, that would otherwise be prohibited, may be considered as “existing”, even if the activity has not yet commenced. The intent is to allow applications in transition to proceed while drinking water threats are managed under the “existing threat” policies.

The CTC Source Protection Committee included a Transition Provision to recognize situations where an approval-in-principle to proceed with a development application had already been obtained, or where a complete application was made prior to the date the SPP came into effect, but requires further planning approvals to implement the application in progress.

The CTC SPP was approved by the Minister of Environment and Climate Change on July 28, 2015 and became effective on December 31, 2015. Applications submitted after the effective date of the CTC SPP may only be transitioned if they are helping to implement an application in process prior to the date the CTC SPP took effect.

“Existing Threat” policies apply to prescribed drinking water threat activities under the following circumstances:

- 1) A drinking water threat activity that is part of a development proposal where a Complete Application (as determined by the municipality or Niagara Escarpment Commission) was made under the *Planning Act*, *Condominium Act* or *Niagara Escarpment Planning and Development Act* (NEPDA) prior to the day the Source Protection Plan comes into effect. The policy for “existing” drinking water threats also applies to any further applications required under the *Planning Act*, *Condominium Act*, Prescribed Instruments, or a development permit under the NEPDA, to implement the development proposal.
- 2) A drinking water threat activity that is part of an application accepted for a Building Permit, which has been submitted in compliance with Division C 1.3.1.13-(5) of the *Ontario Building Code* under the ***Building Code Act, 1992 as amended***, prior to the day the Source Protection Plan comes into effect.
- 3) A drinking water threat activity that is part of an application accepted for the issuance or amendment of a Prescribed Instrument prior to the day the Source Protection Plan comes into effect.

Explanatory Document Text

The Transition Provision outlines the circumstances under which a future significant drinking water threat activity may be considered an existing significant drinking water threat activity.

The *Clean Water Act, 2006* requires source protection plans to contain policies to address both existing and future threat activities. *The Clean Water Act, 2006* further specifies that all policies will come into effect upon the plan approval date or an effective date specified by the Minister of the Environment and Climate Change. Transition provisions have been developed to recognize those situations where an applicant has either obtained an approval-in-principle to proceed with a development application, or where a complete application has already been made to a planning approval authority that are “in process” on the date the Source Protection Plan comes into effect. They are not designed to allow proponents to ignore or circumvent the provision contained in this Plan. They will allow the applications to proceed subject to existing significant drinking water threat policies.

The CTC Source Protection Committee concluded a transition provision should be included in the Source Protection Plan to be fair to those with applications in progress or that have received an approval-in-principle to proceed with works. The policy will allow those with complete applications made under the *Planning Act* or *Condominium Act*, building permits submitted in compliance with Division C.1.3.1.13(5) of the *Ontario Building Code Act, 1992* as amended, development permits under the *Niagara Escarpment Planning and Development Act*, or an application for the issuance or amendment of a Prescribed Instrument prior to the day the Source Protection Plan comes into effect to be treated as existing threat activities.

***Transition Provision and Policy REC-1***

**Policy REC-1 is intended to apply to “future threats” in a WHPA-Q2 with a significant or moderate risk level. However, if an application subject to REC-1 Parts 2a) and 2b) is submitted after the date the source protection plan came into effect (December 31, 2015), but is required to implement a development proposal in progress (as per the Transition Provision), the threat (reducing aquifer recharge) is to be managed as “existing”.**

**Through the plan review process, the Planning Approval Authority will decide what is required to ensure the “existing” threat does not become significant. This is generally to be determined through water balance assessments, or their equivalent (e.g. addendums or amendments to previous stormwater management reports undertaken on site). The Planning Approval Authority may, however, determine that an application submitted after the Transition Provision deadline to implement an application in progress would not increase impervious cover and a water balance assessment (or equivalent) is not required.**

**The CTC Source Protection Committee intended to allow the Planning Approval Authority the flexibility to require the appropriate level of detail in a specific water balance assessment (or equivalent) that is commensurate with the scale and location of the proposed development. Some areas of the WHPA-Q2 are particularly important for recharge (i.e. Significant Groundwater Recharge Areas) and should be given specific protection, while others may not be as important and/or cannot provide the required level of infiltration. Therefore, the water balance assessment (or equivalent) should include a site specific assessment, acknowledgement of previous planning approvals obtained or in progress that could impact infiltration, and an identification of recharge characteristics.**

Ultimately, the intent of the water balance assessment is to demonstrate, to the satisfaction of the Planning Approval Authority, that pre-development recharge will be maintained to the greatest extent feasible through best management practices such as low impact development (LID), minimizing impervious surfaces, and lot level infiltration.

Policy ID	Timelines for Policy Implementation
T-8	<p style="text-align: center;">Land Use Planning</p> <p>Official plans shall be amended for conformity with the Source Protection Plan within 5 years from the date the Source Protection Plan takes effect, or at the time of the next review in accordance with s.26 of the <i>Planning Act</i>, whichever occurs first. Zoning by-laws shall be amended within 3 years after the approval of the official plan.</p>

Explanatory Document Text

Section 40(1) of the *Clean Water Act, 2006* requires that the Council of a municipality or a municipal planning authority that has jurisdiction in an area to which the source protection plan applies shall amend its Official plan to conform with significant threat policies and designated Great Lakes policies set out in the source protection plan. In part 2 of Section 40, the Council or municipal planning authority are required to make these amendments before the date specified in the source protection plan. Timeline T-8 in the CTC Source Protection Plan required that Official Plans be amended for conformity within 5 years from the date the Plan took effect (i.e., December 2020).

Several upper tier municipalities within the CTC Source Protection Region have communicated the difficulty with achieving the December 2020 timeline as outlined in the CTC Source Protection Plan which also impacts the ability of those lower tier municipalities dependent on the completion of the conformity exercise by their upper tier counterparts in meeting the same timeline. Further, the Government of Ontario released the Growth Plan for the Greater Golden Horseshoe ('Growth Plan') in May 2017. The Growth Plan was prepared and approved under the *Places to Grow Act, 2005* and took effect on July 1, 2017. Upper Tier municipalities are expected to review and update their Official Plans to conform with the updated Growth Plan by July 2022; lower tier municipalities must conform within 1 year of their upper tier counterparts. CTC Source Protection Region municipalities have communicated that completing conformity with the CTC Source Protection Plan and the Growth Plan, 2017, in unison, would be more time and cost effective.

CTC Source Protection Plan Policies for Section 34 Amendment – Consultation with Municipalities – April 2, 2018

Policy ID	Implementing Body	Legal Effect	Policy	When Policy Applies	Monitoring Policy
GEN-1	Municipality RMO	A I	<p>s.59 Restricted Land Uses</p> <p>All land uses are designated for the purpose of Section 59 Restricted Land Uses under the Clean Water Act, 2006, with the exception of residential uses, in all areas where the following activities are, or would be, a significant drinking water threat....</p> <p>In accordance with Section 59 of the Clean Water Act, 2006, all land uses, except solely residential uses, where significant drinking water threat activities have been designated for the purposes of Sections 57 and 58 of the Clean Water Act, 2006, are hereby designated as Restricted Land Uses and a written notice from the Risk Management Official shall be required prior to approval of any Building Permit, Planning Act or Condominium Act application.</p> <p>Despite the above policy, a Risk Management Official may issue written direction specifying the situations under which a planning authority or Chief Building Official may be permitted to make the determination that a site specific land use designation is, or is not, designated for the purposes of Section 59. Where such direction has been issued, a site specific land use that is the subject of an application for approval under the Planning Act or for a permit under the Building Code Act is not designated for the purposes of Section 59, provided that the planning authority or Chief Building Official, as applicable, is satisfied that:</p> <ol style="list-style-type: none"> <li>The application complies with the written direction issued by the Risk Management Official; and,</li> <li>The applicant has demonstrated that a significant drinking water threat activity designated for the purposes of Section 57 or 58 will not be engaged in, or will not be affected by the application.</li> <li>Where the Risk Management Official has provided written direction designating a land use for the purpose of section 59, a written Notice from the Risk Management Official shall be required prior to approval of any Building Permit under the Building Code Act, 1992 as amended, in addition to Planning Act and Condominium Act applications in accordance with Section 59 of the Clean Water Act, 2006.</li> </ol>	<p>Immediately (T-9)</p> <p>Amend OPs for conformity <del>within 5 years</del> and ZBLs within 3 years of OP approval (T-8)</p>	<p>MON-1</p> <p>MON-2</p>

Explanatory Document Text

Policy GEN-1 manages existing and future activities within vulnerable areas where the activity is or would be a significant drinking water threat as designated under section 59 of the Clean Water Act, 2006, by requiring Risk Management Officials to screen applications for works proposed under the Planning Act, the Condominium Act, and the Building Code Act, 1992 as amended, excluding residential uses.

CTC Source Protection Plan Policies for Section 34 Amendment – Consultation with Municipalities – April 2, 2018

Where the activities are or would be a significant drinking water threat, this policy requires municipalities to designate land uses within their Official Plans and Zoning By-Laws. This will allow for the pre-screening by the Risk Management Official, ~~via~~ using section 59 of the *Clean Water Act, 2006*. Section 59 policies require that municipalities put a process in place to “flag” for the Chief Building Official and the Planning Department applications made under the *Planning Act* and ~~of~~ the *Condominium Act*, as well as ~~an~~ application for a building permit under the *Building Code Act, 1992*, as amended, that is within a vulnerable area where a threat could be significant and where Part IV authorities are being used to prohibit or manage activities. The “flag” would indicate to the Chief Building Official or the Planning Department that the proposal needs to be reviewed by the Risk Management Official. Once the Risk Management Official is satisfied that the applicable Part IV policies are addressed, he/she would issue a “Notice to Proceed”. This Notice is used to let the Chief Building Official or Planning Department know they can proceed with ~~in~~ processing the proposal.

**Risk Management Officials in the CTC Source Protection Region have communicated that Policy GEN-1, as originally written, had ambiguity regarding their ability to determine when site-specific land uses, activities, or building projects are or are not subject to Section 59 Notice requirements under the Clean Water Act, 2006. The revised policy text now has clear policy direction allowing Risk Management Officials the autonomy to determine the site specific land uses that both are and are not subject to Section 59 Notices.**

				<ul style="list-style-type: none"> <li>the remainder of an Issue Contributing Area for Nitrates or Pathogens (future).</li> </ul>			

Explanatory Document Text

Policy SWG-3 is a land use planning policy for future septic systems, including holding tanks, governed under the *Building Code Act, 1992*, as amended, ensuring that vacant lots of record be subject to site plan control so that the location of individual on-site sewage systems and replacement beds are only permitted if they are sited to ensure they do not become a significant drinking water threat. The intent of this policy is to ensure that site plan control, as a planning and development control tool, is used to optimize the location and design of septic systems when existing vacant lots of record are proposed to be developed within certain designated vulnerable areas identified in the policy.

The CTC Source Protection Committee recognizes that prohibiting a septic system on a vacant lot where there is no municipal sewer connection available may make it impossible to build on such a lot which has received prior approval for such a use from the municipality, to obtain a building permit for the lot and thereby void previous planning decisions to create and zone the lot for development. This was deemed considered to be a significant hardship for the landowner. For this reason, the Source Protection Committee has provided through this policy for the municipality to subject vacant lots of record to site plan control to ensure sewage systems and replacement beds are only permitted if they can be appropriately sited and constructed to protect the municipal well-chosen to require the enactment or amendment of municipal site plan control by-laws to allow for the detailed review of on-site sewage systems for vacant lots in order to optimize their location and design relative to the designated vulnerable areas present.

The verb “optimize” means “to make as effective as possible” or “to make the best of” and was chosen to allow municipal planning authorities the flexibility to use sound professional judgement in the review and approval of the siting and design of on-site sewage systems proposed to facilitate the development of existing vacant lots as part of the municipal site plan control process.

The policy directs municipalities to “adopt Official Plan policies that require the enactment or amendment of Site Plan Control By-laws” for the purposes of the policy. This structure is introduced for the following reasons. First, the *Clean Water Act, 2006* provides in s. 40 and s. 42 that a municipality shall amend its Official Plan and Zoning By-laws to conform to the significant threat policies set out in the source protection plan. There is no authority for the source protection plan to direct that site plan control by-laws conform to the source protection plan outside of the Official Plan conformity process. Second, the *Planning Act* requires municipalities to have enabling policy in their Official Plans in order to use the site plan control power. Requiring an Official Plan to contain specific site plan control by-law policies is therefore consistent with the provisions of the *Clean Water Act, 2006* and current practice under the *Planning Act*.

Municipalities affected by the SWG-3 policy are encouraged to amend their site plan control by-law and associated application review processes in order to conform with this policy in advance of future Official Plan conformity policy direction on a voluntary basis in order to advance the implementation of the source protection plan in as timely a manner as possible. Municipalities are also required to continue to monitor the aquifer and report on the results (see GEN-7). Should the contaminant levels continue to increase, it may be necessary to review this policy and others associated with the Issue.

CTC Source Protection Plan Policies for Section 34 Amendment – Consultation with Municipalities – April 2, 2018

Explanatory Document Text

Policies SAL-10 through SAL-13 apply to low and moderate threat areas.

The CTC Source Protection Committee has chosen to include a land use planning policy using *Planning Act* tools and a number of Specify Action policies where the threat is low or moderate in recognition that road salt application and storage activities are carried out throughout ~~all source-protection-areas~~ **the source protection region**; chloride and sodium are very mobile chemicals that move easily and rapidly into and through aquifers; and that there are many other sources of drinking water that may be protected as well through implementation practices to reduce the threat.

All of these low and moderate threat policies are non-legally binding. Each specific implementer must have regard for the policy in making decisions, but has the flexibility of determining what action(s) will be taken. While an implementer is not required to provide a report on their actions on implementing low or moderate threat policies, the CTC Source Protection Committee encourages them to provide information that will help in future review and revision of policies.

SNO-1	Storage of Snow	RMO	G	<p><b>Part IV, s.57, s.58</b></p> <p>Where the storage of snow is, or would be, a significant drinking water threat, the following actions shall be taken:</p> <p>1) The storage of snow is designated for the purpose of s.57 under the <i>Clean Water Act</i>, and is therefore prohibited where the threat is, or would be significant, in any of the following areas:</p> <ul style="list-style-type: none"> <li>• WHPA-A (existing, future); or</li> <li>• <del>WHPA-B (VS = 10) (future); or</del></li> <li>• <del>WHPA-E (VS ≥ 9) (future); or</del></li> <li>• <del>the remainder of an Issue Contributing Area for Sodium or Chloride (future);</del></li> </ul> <p><del>Notwithstanding the above, emergency snow storage may be permitted outside of WHPA-A as determined by the risk management official and the municipality responsible for snow storage.</del></p>	See Maps 1.1 - 1.21	<p>Future: Immediately (T-5)</p> <p>Existing: 180 days (T-4)</p>	MON-2
				<p>2) The storage of snow is designated for the purpose of s.58 under the <i>Clean Water Act</i>, requiring risk management plans, where the threat is significant in any of the following areas:</p> <ul style="list-style-type: none"> <li>• WHPA-B (VS = 10) (existing, <b>future</b>); or</li> <li>• WHPA-E (VS ≥ 9) (existing, <b>future</b>); or</li> <li>• The remainder of an Issue Contributing Area for Sodium or Chloride (existing, <b>future</b>).</li> </ul> <p>Without limiting other requirements, risk management plans shall include appropriate terms and conditions to ensure the storage of snow, and associated runoff, ceases to be a significant drinking water threat.</p> <p><b>Notwithstanding the above, emergency snow storage may be permitted outside of WHPA-A as determined by the risk management official and the municipality responsible for snow storage in the absence of a Risk Management Plan.</b></p>		<p>Existing: 1 year/ 5 years (T-6)</p>	

CTC Source Protection Plan Policies for Section 34 Amendment

Explanatory Document Text

Policy SNO-1 prohibits existing and future snow storage in WHPA-A and future snow storage in WHPA-B (VS = 10), WHPA-E (VS ≥ 9) and in the remainder of an Issue Contributing Area for Sodium or Chloride. In the WHPA-B (VS = 10), WHPA-E (VS ≥ 9) and in the remainder of an Issue Contributing Area for sodium and chloride, existing and future significant drinking water threats are managed using a Risk Management Plan. ~~In Emergency snow storage may be permitted outside of WHPA-A as determined by the Risk Management Official and the municipality responsible for snow storage in the absence of a Risk Management Plan.~~ ~~situations, future snow storage may be permitted outside of WHPA-A as determined by the Risk Management Official. Existing snow storage is otherwise managed outside of WHPA-A requiring a Risk Management Plan.~~

Storage of snow can pose a significant drinking water threat depending on the geographic location of the storage area and whether the snow is stored above or below grade. In general, the greater the snow storage area, the greater the risk to drinking water. Generally, snow storage is a seasonal activity that takes place on along roadsides, parking lots, and vacant land without the construction of permanent facilities. ~~When originally developing this policy the CTC Source Protection Committee encouraged, where possible, the existing storage of snow (which often contains road salts and other contaminants) be located outside of vulnerable areas where possible.~~ ~~The policy as currently written prohibits the existing and future storage of snow in the WHPA-A, the most vulnerable area to a municipal well, as well as future occurrences of the activity where it would be a significant drinking water threat in the WHPA-B (VS=10), WHPA-E (VS≥9), and the remainder of the Issues Contributing Area for sodium and chloride. Given the large surface areas in the Credit Valley Source Protection Area covered by Issues Contributing Areas for sodium and chloride, municipalities have communicated the difficulty implementing a prohibition of a potential future activity. A number of provisions could be included in a Risk Management Plan to ensure that the storage of snow does not become a significant drinking water threat, therefore, the CTC Source Protection Committee has opted to manage any future instances of the activity outside of the WHPA-A.~~

REC-1	An activity that reduces recharge to an aquifer	Planning Approval Authority	A	<p><b>Land Use Planning</b> (Planning Policies for Protecting Groundwater Recharge)</p> <p>For applications under the Planning Act within the Tier 3 Water Budget WHPA-Q2 identified as having significant water quantity threats, the relevant Planning Approval Authority shall ensure recharge reduction does not become a significant drinking water threat by:</p> <ol style="list-style-type: none"> <li>1) Requiring new development and site alteration under the <b>Planning Act for lands zoned Low Density Residential (excluding subdivisions) or zoned Agricultural</b> to implement best management practices such as Low Impact Development (LID) with the goal to maintain predevelopment recharge. <b>Implementation of best management practices is encouraged, but voluntary, for Agricultural Uses, Agriculture-related Uses, or On-farm Diversified Uses where the total impervious surface does not exceed 10 per cent of the lot.</b></li> <li>2) Requiring that all site plan <del>(excluding an application for one single family dwelling) and subdivision applications to facilitate major development (excluding development on lands down-gradient of municipal wells in the Toronto &amp; Region Source Protection Area [Figure XI])</del> for new residential, commercial, industrial and institutional uses provide a water balance assessment for the proposed development to the satisfaction of the Planning Approval Authority which addresses each of the following requirements:             <ol style="list-style-type: none"> <li>a) maintain pre-development recharge to the greatest extent feasible through best management practices such as LID, minimizing impervious surfaces, and lot level infiltration;</li> <li>b) where pre-development recharge cannot be maintained on site, implement and maximize off-site recharge enhancement (within the same WHPA-Q2) to compensate for any predicted loss of recharge from the development; and</li> <li>c) for new development (excluding a minor variance) within the WHPA-Q2 and within an Issue Contributing Area (for sodium, chloride or nitrates), the water balance assessment shall consider water quality when recommending best management practices and address how recharge will be maintained and water quality will be protected.</li> </ol> </li> </ol> <p><b>The Planning Approval Authority shall use its discretion to implement the requirements of this policy to the extent feasible and practicable given the specific circumstances of a site and off-site recharge opportunities.</b></p> <ol style="list-style-type: none"> <li>3) Only approving settlement area expansions as part of a municipal comprehensive review where it has been demonstrated that recharge functions will be maintained on lands designated Significant Groundwater Recharge Areas within WHPA-Q2.</li> <li>4) Amending municipal planning documents to reference most current Assessment Reports in regards to the Significant Groundwater Recharge Areas within WHPA-Q2.</li> </ol>	<p>Future: WHPA-Q2 with a significant risk level</p> <p>See Maps 3.1 3.2</p> <p>Future: WHPA-Q2 with a moderate risk level</p> <p>See Maps 3.3 3.4</p>	<p>Future: Immediately (T-9)</p> <p>Amend OPs for conformity <del>with</del> <b>5-years</b> and ZBLs within 3 years of OP approval (T-8)</p>	MON-1

## CTC Source Protection Plan Policies for Section 34 Amendment

### EXPLANATORY DOCUMENT TEXT

Policy REC-1 is a land use planning policy that manages activities that reduce recharge to an aquifer. This policy applies to future threats in a WHPA-Q2 with a significant or moderate risk level.

The intent of the policy is to ensure that the Planning Approval Authority makes decisions that do not result in recharge reduction from new development becoming a significant drinking water threat within a WHPA-Q2. The Planning Approval Authority, through the plan review process (i.e., *Planning Act* applications) will determine what is required, and determine the acceptability of the proposed actions, in the water balance assessments.

The CTC Source Protection Committee wants the Planning Approval Authority to have the flexibility to require the appropriate level of detail in a specific water balance assessment commensurate with the scale and location of a proposed development. For example, within the WHPA-Q2 are areas that have been identified as Significant Groundwater Recharge Areas which are particularly important due to the nature of the soils and slope that permit higher than average infiltration of precipitation to replenish the groundwater. These areas should be given particular protection. Other areas **within the Tier 3 WHPA-Q2**, may not be important for recharge and/or cannot provide the required infiltration due to the local soil and slope conditions. Site specific assessment and identification of the recharge characteristics of the site should be part of such water balance assessments **or equivalent**. Where a detailed assessment is warranted, using the current version of the Tier 3 Water Budget model and updated information should ensure that the results are technically robust and comparable to the original analysis. The local source protection authority has the model files and information to support this analysis, but it is envisioned that an applicant will have to retain qualified expertise to do the analysis.

The Source Protection Committee encourages the “complete application” check list be updated to include the Water Balance Assessment.

The intent of Part 1) of the policy is to ~~avoid the burden on individual residential owners or agricultural owners by requiring that they undertake expensive hydrogeological assessments, but to protect recharge by requiring instead that they implement best management practices that will reduce or eliminate any impact from their building or development activities that are subject to planning approvals, provide an appropriate level of policy direction to maintain recharge for development and site alteration associated with smaller-scale or agriculture-related development not covered by Part 2 of this policy. In lieu of providing hydrogeological assessments, applicants are required, or in the case of agriculture-related development where the total lot impervious surface is beneath a threshold of 10 per cent, encouraged to voluntarily implement best management practices, that will reduce or eliminate any impact from their building, or development, or site alteration activities that are subject to planning approvals~~

~~With respect to the voluntary implementation of Part 1) of this policy for Agricultural Uses, Agricultural-Related Uses, and On-farm Diversified Uses these terms have the same meaning as defined in the *Provincial Policy Statement, 2014* and as further articulated in the *Guidelines on Permitted Uses in Ontario's Prime Agricultural Areas, 2016*. The 10 percent impervious threshold for agricultural-related uses is adapted from Policy 3.2.4.2 of the *Greenbelt Plan, 2017* for the purposes of this policy.~~

In general, on low density and agriculturally zoned lands, it is possible to ensure that roof and impermeable surface run-off can be directed to on-site infiltration and thus maintain recharge without requiring technical assessments.

The intent of Part 2) of this policy is to ensure **certain** *Planning Act* applications ~~(excluding an application for one single family dwelling and on-lands-zoned agricultural)~~ include an assessment of the potential reduction in recharge so that specific measures are identified and implemented to ensure the proposal does

## CTC Source Protection Plan Policies for Section 34 Amendment

not result in recharge reduction becoming a significant drinking water threat within a WHPA-Q2. This requirement applies to **major development** on lands with the greatest potential for reducing recharge, such as commercial, employment, institutional, industrial uses and includes residential subdivisions. ~~but excludes an application for one single-family dwelling.~~ *Planning Act* applications applicable to Parts 2 (a) and (b) include site plan applications, draft plan of subdivision applications, and any associated implementing official plan or zoning by-law amendment applications, **however, applications for development on lands zoned agricultural, which do not meet the criteria for major development, and any development on lands down-gradient of municipal wells in the Toronto and Region Source Protection Area [See Figure X], are exempt from Part 2).**

The intent of Part 2 (b) is to allow the municipality the option where it meets local requirements to require the applicant to locate compensating recharge on another site within the WHPA-Q2 where it is not feasible to protect pre-development recharge within the development site. The CTC Source Protection Committee concluded that the local municipality is best placed to determine the optimal actions to protect recharge and this provides them some local flexibility in their decision-making.

Part 2 (c) of this policy applies ONLY to those parts of a WHPA-Q2 which are also within an Issue Contributing Area for Sodium, Chloride or Nitrate. These areas are shown on the maps in the appendices ~~in~~ **of** the CTC Source Protection Plan and also will be provided by the Source Protection Authority in other formats upon request to municipalities or other planning approval authorities. This requirement is intended to ensure that any risk management measure that is implemented to maintain recharge does not create a threat to source water quality. For example, infiltration of stormwater containing road salt in an Issue Contributing Area for Sodium or Chloride is a significant drinking water threat and subject to policies SWG-11 and SWG-12. The CTC Source Protection Committee has included Part 2 (c) of this policy for clarity to ensure that an implementing body does not inadvertently approve an activity to protect water quantity that is a threat to water quality.

The intent of Part 3) is to ensure municipalities evaluate planned growth against recharge reduction at a large scale and only proceed if the planned growth will not result in new significant drinking water threats. Once feasibility of the growth is confirmed, development proponents are subject to Parts 1) and 2) of this policy which are site-specific.
